

CivicData.com

Democratizing your Open Data

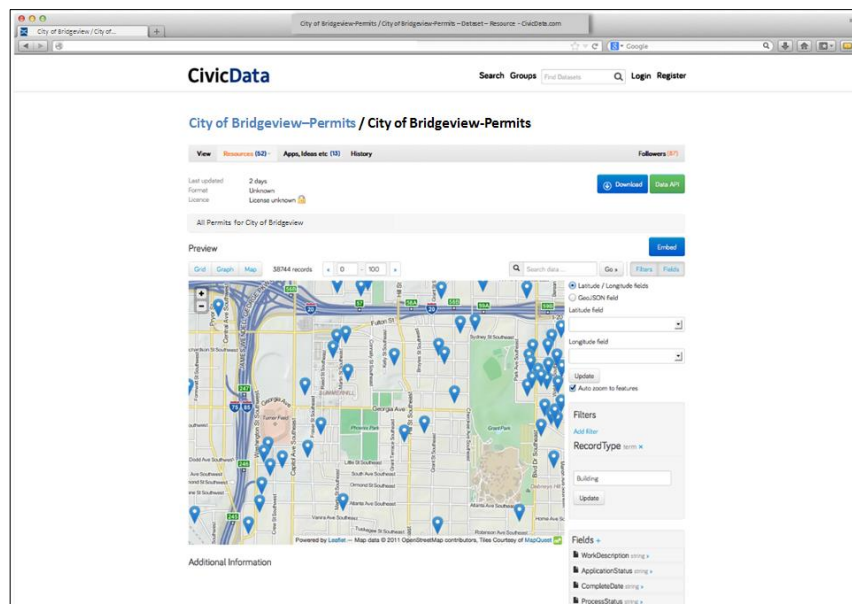

The open data movement has the potential to impact governing, civic engagement and government business. Today, a small fraction of agencies are actively providing open data. It can be complicated to publish and costly to manage, and there are very few implemented standards—datasets are described in very different ways.

CivicData.com is a cloud-based open data platform that makes it easy for government agencies to publish and manage datasets and offers civic-minded developers an easy, standardized way to view multijurisdictional data in real time. Through open data initiatives and with standardization, Accela enables government agencies and developers to publish, build upon, visualize and extract value from civic datasets. The service, currently available in beta, gives Accela customers and prospects the ability to provide rich government data to citizens and developers looking to transform it into civic solutions.

CivicData.com will unlock the value of open data while helping agencies move to transparency and trust as they offer citizens and businesses access to civic information that was historically difficult to access.

Benefits:

- Offers real-time data for free to Accela customers, Code for America Brigades and civic-minded developers
- Enables agencies of all sizes to publish and add value to datasets in a single platform
- Responds to FOIA requests automatically, speeding response to citizens and businesses
- Gains insights and analysis from standard, multijurisdictional data

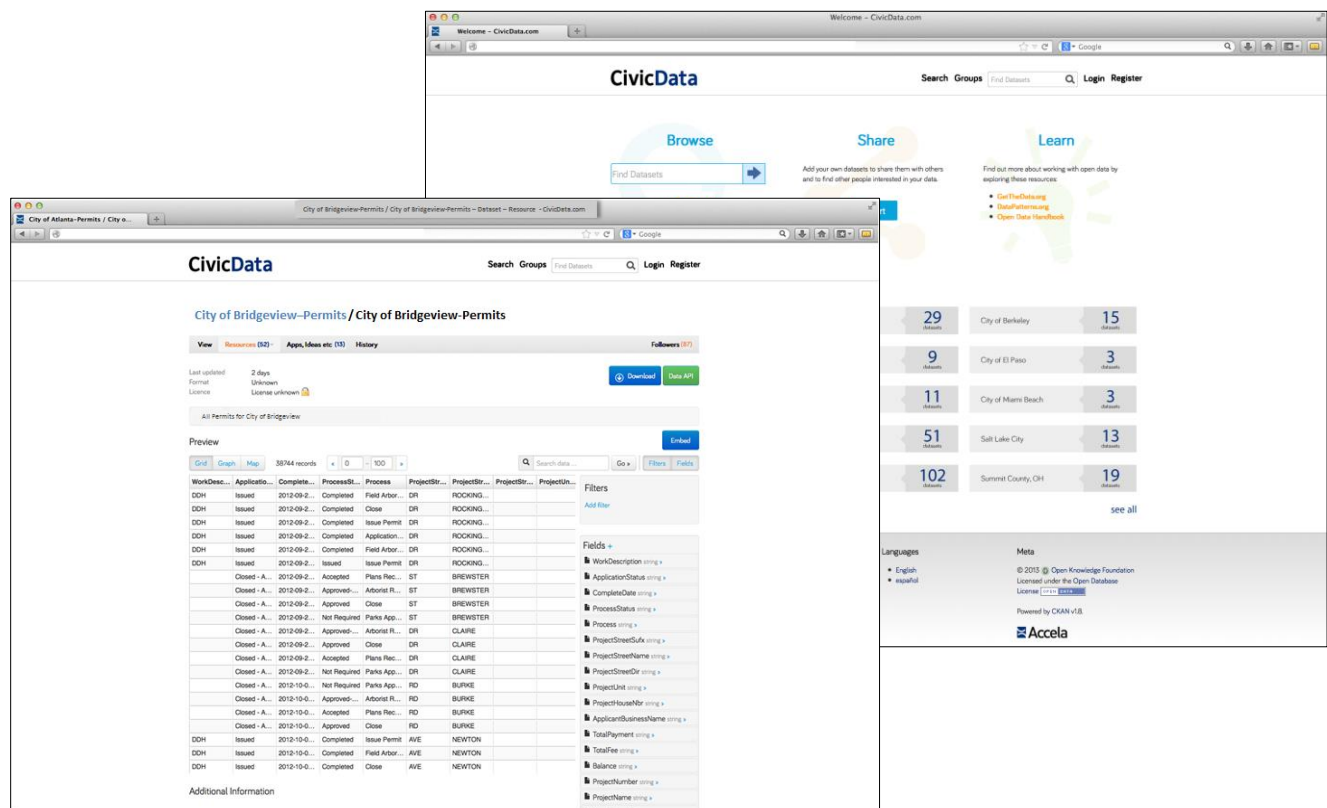

Visualize open data with integrated mapping tools and smart charts.

Key Features:

- o Standard dataset definitions for common Accela services
- o Out-of-the-box support for standards such as LIVES and House Facts
- o Standard APIs that let developers build apps with individual and multi-agency datasets
- o Ability to chart and graph agency data to display application history, trends and more
- o Layering of additional analytic capabilities to support different audiences
- o Complete catalog system with easy-to-use web interface and a powerful API
- o Integrated data storage and full data API
- o Fine-grained access and security control
- o Federated structure allows easy setup of new instances with common search

Workflow support enables agencies to manage their own data publishing, visualization and analytics.
